GroupWise® Security by Beginfinite

Customers Say: SoBig? So what!

GroupWise® protection inside and out
GWAVA 2.5 protects your GroupWise 6 system from the inside out. By operating from within GroupWise,® GWAVA's unique protection offers total security and peace of mind thanks to its Post Office Level Scanning.

So what?

It means every piece of mail in your post office is examined, not just inbound mail from the internet. This means that even if your post office is riddled with infected SoBig-F attachments, all you need to do is block .SCR and .PIF files, then ask for a Post Office Scan.

You'll have said "so long" to SoBig before you know it.

It's been a pleasure

GWAVA for almost 2 years now and have had those type of attachments in addition to others blocked during that time.

It has been a pleasure watching GWAVA block the Sobig-F virus the past few days and no one has gotten anything related to that or other virus attacks in our department thanks to GWAVA.

Thanks

Development Services - Pima County

A tip of the hat

My hat off to GWAVA!!! We were bombarded by the SoBig over the last couple of days. Yesterday in particular—literally thousands of them. It was so bad we had to stop archiving blocked attachments to save space on the email volume.

Can't thank you enough

Wisconsin Historical Society

10,000 blocked

Just wanted to let you know how wonderful we think GWAVA is. I just deployed it this week. (Just in time to prevent SoBig-F!!!!)

We have blocked well over 10,000 possible infections using the attachment blocking feature. We plan on adding the anti-spam feature in the near future. Server utilization is around 7% even with attachment blocking (w/fingerprinting) and antivirus enabled. Server is dual P3 550 with 1GB ram.

Thanks again for a great product. (And the patience to go through our procurement process!!!)

Md Dept. of the Environment
